Re: Five-Year Review Notification
Dow Corning Corporation – Greensboro Facility
EPA ID #: 003 221 546

Dear Ms. Edgerton:

The North Carolina Hazardous Waste Management Rules (15A NCAC 13A) provide that each Alternate Mechanism in lieu of a Post-Closure Permit for a land disposal facility shall be reviewed five (5) years after the date of issuance or reissuance and shall be modified as necessary to assure that the facility complies with current applicable hazardous waste management requirements. This provision is found in 40 CFR 270.50 (d) as adopted in 15A NCAC 13A .0113 (h).

Your facility has an Alternate Mechanism in lieu of a Post-Closure Permit (2011 090) that has been effective for five (5) years (executed September 14, 2011). This Alternate Mechanism in lieu of a Post-Closure Permit is now under review by the Hazardous Waste Facility Management Branch to determine the need for any modification. You may receive comments or questions from us in the near future as the review progresses. Also a site visit may be requested if necessary to supplement the review. Adequate notification will be provided to you prior to any scheduled site visits to allow you to make the necessary arrangements.

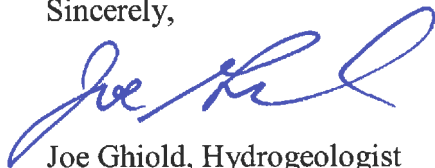

You will be notified should it be determined that a modification is necessary to either the Alternate Mechanism in lieu of a Post-Closure Permit or to any associated documents contained in the Alternate Mechanism in lieu of a Post-Closure Permit. Modification procedures can be found in 40 CFR 270.41 as adopted in 15A NCAC 13A .0113 (g). You will be given an opportunity to comment on any proposed changes to your documents through a public comment period and a public hearing, if applicable.

On another matter regarding the site, we feel this facility should proceed with drafting a final remedy as stated in Section V, M. 2 of the Alternate Mechanism document (2011 090) executed in September of 2011. We would hope that such an effort can be initiated and accomplished in the coming months.

Ms. Edgerton
